

AFERCOIN

Whitepaper

V3.1

AFERCOIN AFR

THE WEALTH BUILDUP DECENTRALIZED FINANCING PROJECT

Afercoin is a decentralized financing project gives complete anonymity to it's users and investors.

Afercoin AFR is a ERC20 smart token based token.

It allows users to send/receive tokens via Ethereum chain to any corner of the world with complete anonimity and minimal transaction fees at lightening fast speed.

Afercoin decentralized investment plan allows users to invest Afercoins with us for direct return in ETH to your provided ETH address.

In crypto race Afercoin will give best returns to it's users and investors.

Afercoin is also crypto market liquidity provider from funds raised from token sale.

Raised funds will be used to develop Project Afercoin, provide liquidity in crypto market and sharing of profit to investors.

Afercoin has a complete new concept to resist in bear market and to keep token price always up.

Unlike other tokens Afercoin has well planned to go ahead in cryptoworld without falling or failing.

1. Introductions

1.1 Project Introduction

Afercoin Project is wealth buildup project with token based on ERC20 Smart Contract maximum 1,000,000,000 (One Billion) tokens.

Supply limit will be capped by one billion tokens forever.

Afercoin Project has unique plan to keep market value of token up by providing liquidity to Afercoin markets.

We also provide liquidities in other crypto markets and invest in other projects/coins/markets to gain profit with minimal risks.

Profit generated from our investments will be shared to those who invested their tokens with us in manner of complete decentralized with complete anonymity.

This is a unique project to provide market liquidity and profit to investors with anonymity and also profit from sales of tokens at high price anytime investors want to.

1.2 Token Introduction

Afercoin AFR is ERC20 p2p payment token as other crypto token with anonymity and low fees at Ethereum chain.

Afercoin AFR token sales are at lowest price for investors to take benefit from it from the beginning by trading or hodl for long-term.

1.3 Concept

The Project concept is to provide crypto market liquidity, benefit it's users and to help users/investors buildup their wealth with us lowest risks.

The token feature will give complete anonymity and freedom to users to store/trade/invest in various ways.

Afercoin is ERC20 token so users have total control over it and free to use as they desire.

1.4 Goal

Our main goal is to support crypto markets/traders/investors with maximum possible liquidity which is came in via token sale.

And to encourage new crypto projects/markets/devs with every possible way.

2 Specs

2.1 Token Specs

Token Logo: 

Token Name: Afercoin

Token Type: ERC20 Token

Max Supply: 1 000 000 000 (One Billion)

Circulation Supply: 1 000 000 000 (One Billion)

Website: <https://afercoin.info>

Block Explorer: <https://etherscan.io/token/0x780005ce3ab898bb402c124b4f71ff084d550111>

Wallets: <https://afercoin.info/wallets>

Exchanges: <https://etherdelta.com/#0x780005ce3ab898bb402c124b4f71ff084d550111-ETH>

Twitter: <https://twitter.com/AferMaca>

Discord: <https://discord.gg/Mcne4Uf>

2.2 Chain Specs

Token Chain: ERC20 on Ethereum chain

Contract Address: 0x780005ce3ab898bb402c124b4f71ff084d550111

ICO Address: 0xf8109d36f68945fd39a7c4a04aa61a972a5935ba

Investment Address: 0xc9650Cf15C62d5957374aDe0B4d6b16fa2414461

3. Risk Factors

3.1 Token

As we all know all cryptocurrencies/tokens come with no price guarantee not guarantee of value in future Afercoin also falls in same category but unlike other tokens our project is bind to provide continue liquidity to Afercoin markets and development of project with LTS.

3.2 Investment

Investment will be made from funds raised via token sales with extra cautions by our executive for minimum risk and high gain from investment to share maximum profit to those who invested their Afercoins with us.

Yet there will be no guarantee of returns because crypto markets are highly volatile and profiting from it sometimes nearly impossible so in such situations investors have bare and wait for profit or one can redeem back invested coins anytime he/she wants to, also there is no fix profit or minimum profit guarantee on your investments also no timespan.

But our team will try the best to generate maximum profit and share with investors time to time to run project long and increase trust-rates of the project.

4. Development

4.1 Project Development

Afercoin Project development will be continued to provide best chain and profit to users investors and to provide market liquidity.

In future we might consider upgrade of chain with equal max supply but own blockchain (Only if needed to) otherwise ERC20 chain is more reliable and trusted in compare with personal/own blockchain.

Development of features of token, mobile apps, web apps etc. to be launched once sufficient users/investors/funds are available and it is needed to grow community/users.

Once all goes well we will plan to development our platform with more featur, wallets to expand project with different business modules.

4.2 Chain Development

Currently Ethereum chain is more trusted and reliable also familiar to most crypto investors and easy to use so we will only consider development of own blockchain after user reviews if really needed to upgrade or necessary to move to own chain.

5. Market Liquidity

5.1 Afercoin Markets

Market liquidity will be provided to Afercoin markets time to time to keep AFR price stable and in upwards.

5.2 Crypto Markets

To gain profit and share with users our executives will invest in top cryptocurrencies when market indices very low or changes are big to get good returns.

Also long-term investments in top cryptocurrencies will be made to assure profit for our investors.

5.3 Token Markets

For high return our executives will invest in token markets as well to get maximum profit out of it with small investment as token markets are extremely risky.

New tokens, contract based token purchase from pre-sale by dev sometimes give huge return in short-term or right at its launch so this time of investments extra cautions will be made to gain good return in short-term and profit will be shared to our investors.

5.4 Other Projects

Our executives will keep tracking other projects or new projects and if they are legit executives will research and invest in such project for short-term or long-term with liquidity options.

6. Investment Benefits

6.1 Price Rise

Afercoin buyers/investors will definitely gain huge from their investment since we have great wealth buildup concept and plan for AFR price stays stable and in uptrend by providing liquidity to Afercoin markets.

So Afercoin holders will always have chance to exit with profit without risk of loss.

6.2 Share From Profit

Those who invest their Afercoin with us will get profit share from us direct to their Ethereum address in ETH plus they can redeem their investment anytime to sell their tokens in market if price is high.

So investors are likely to gain both-way profit from their investments.

7. Roadmap

Phase I

Jan 2019, Planned token launch and teaming up.

Phase II

Mar 2019, Created token with 10m max supply at Bitmxttzex and listed to trade.

Phase III

Jul 2019, Switched to ERC20 tokens with max supply of 1 billion and listed to trade on exchanges.

Phase IV

Jan 2020, Website development.

Phase V

Aug 2020, Personal and private investments in project.

Phase VI

May 2021, Listing at more platform for exchange.
